Circular No: MCXTECH/261/2026 May 05, 2026

Introduction of Separate Product IDs and Product Name for Call and Put Options

To enhance operation efficiency the exchange would be introducing separate product ids & product name for CALL and PUT options contracts in the Trading System. Member are requested to take a note of following:

Product ID Classification: At present, Option contracts share a unified Product ID. The exchange will introduce separate Product IDs and Product Name which will be assigned to Call (C) and Put (P) options for specific commodity contract.

- Example: For Gold Option contracts the current symbol is **OFGLD**, the Product name will be split into **OFGLDC** (for Call) and **OFGLDP** (for Put) and they may be provided in different partition.
- This change will be reflected in the **MCXScrips.bcp** file (reference data file).

Mass Order Cancellation: Members are advised that during Mass Order Cancellation, requests they should send based on these specific Product ID. If a contract is split (e.g., Gold), members must send two separate requests to cancel orders for Call and Put options respectively.

No Change to Other Parameters, Members may please note that:

- Symbol & Security Details: There are no changes to the Symbol name or other existing details in the MCXScrips.bcp file.
- API & Reports: There are no changes to any API structures or member-facing files, including the Bhav Copy, Trade File, Real-Time (RT) feeds, or other reporting files.
- Market Data MDI, EMDI, EOBI will contain the linked product id of split products for contracts mapped to it wherever product id is sent.

Whenever new split product is introduced for the commodity option contract, all the GTC/GTD orders will be cancelled for the same.

Members and vendors are requested to have readiness to initiate testing and configure front-end systems accordingly to handle split Product IDs for order management.

The exchange shall provide these changes in Test environment shortly for necessary testing and shall conduct mock trading session.
